

The Force in Flexible Magnetics®

FEBRUARY 26, 2014

Attn: To Whom It May Concern

RE: CONEG

Please be advised of the following information regarding CONEG for Magnum Magnetics:

Per review of supplier-provided Material Safety Data Sheets and other documents such as letters of conformity as well as independent laboratory testing for migration of heavy metals (lead, etc.); our plain flexible magnetic sheeting and extrusion products pass Coalition of Northeastern Governors (CONEG) Model in Toxics Packaging Legislation (first developed in 1989). Magnum Magnetics does not intentionally add any of the four metals (lead, mercury, cadmium, or hexavalent chromium) mentioned in the legislation. The sum concentration of these four metals (lead, mercury, cadmium, or hexavalent chromium) is <100 ppm.

Sincerely,

Joe Stout
Director of Product Development & Quality
Magnum Magnetics Corporation
